NOTES.

Where a "+" sign follows the number of valves, thus: 6+, it indicates that a magic eye tuning indicator is used.

Unless otherwise stated, all models have broadcast (BC) coverage only; AW= all wave. DW= dual wave BS= bandspread.

The year dates listed above are actually the dates of printing of the manufacturer's service data sheets; in most cases receivers were released prior to the dates shown.

The model numbers incorporated a date coding indicating the year of manufacture as explained below.

MODEL NUMBERING SYSTEM

Prior to 1940 no standardised system of encoding details of a particular model in its model number was employed. In any case, receivers made prior to about 1934 apparently were not assigned model numbers. Commencing in 1940 a three figure model numbering system came into use in which the first numeral indicated the number of valves, the second numeral indicated the number of bands and third numeral the year of manufacture, thus- 726=7V,2b, 1946. With the start of a new decade in 1950 an additional numeral was required to indicate the year of issue, thus 5151 = 5 -valves, 1 band, 1951. This system remained in use until 1957 when model names replaced model numbers.
