EXELRAD KIT SETS

5D2.—Five Valve, Dual Wave, with Magic Eye optional.

This Valve Dual Wave Kit, with Magic Eye optional, employs a 2-gang Condenser instead of a 3-gang, as used in the 5D3. This feature gives added sensitivity when combined with the new advanced circuit using High Gain and Iron Cored I.F. Transformers.

The receiver is superior to any 5 Valve Kit Set available to Home Constructors, proving again that Exelrad engineers are right up to the mark in the design of Kit Sets which are easy to construct by the merest amateur. No special knowledge is necessary to make a first-class receiver from the Kit of parts supplied, providing the Circuit Diagram is followed carefully.
