

11 VALVE BAND SPREAD

Illustration shows the mantel model only, but console and De Luxe lowboy Radiograms are also made. Cabinets are of exquisite burr walnut veneers designed for maximum eye appeal and rich tonal qualities. The special circuit incorporates two novel features—stepped tone control system and noise peak limiter with sensitivity switch. Gramophone pick-up and extra speaker facilities through a new and trouble free system are also an added appeal.

RAB- Oct 1948
